

Telecom Operator KPI Catalogue

BSS · OSS/IT · Network · Infra/Cloud · Security · AO maturity

Holistic KPI framework for a Tier-1 operator. Four layers: Executive north-stars → Domain scorecards → Customer journey → Operational drill-down. Sample dashboard: [operator-kpi-dashboard.html](#)

Executive north-stars (12–15 KPIs)

- Net sales / revenue growth (by segment, channel, product)
- Service margin / EBITDA contribution
- Active subscriber base & net adds
- Voluntary & involuntary churn; MNP port-in / port-out (operator-wise)
- ARPU / ARPA
- NPS / CES / complaint rate
- Customer-facing network & application availability
- P1/P2 MTTR
- ... +5 more (see Word doc)

Commercial & sales (COP · CHQ · digital · partners)

- Gross sales by channel: COP (company-owned stores), CHQ (contact centre), digital, partners
- Conversion: lead → quote → order → activation
- Attach / upsell rate; promo uptake vs margin
- Order fallout & re-quote rate
- CAC by channel; partner commission accuracy

Customer lifecycle & retention

- Gross churn, net churn, voluntary vs involuntary
- MNP port-out / port-in by competitor
- Churn by segment, tenure cohort, high-value base
- Early-life churn (0–90 days); save rate; win-back rate
- Contract renewal rate

BSS — order-to-cash & revenue cycle

- Order capture volume & lead time (order created → accepted)
- Order-to-activate (O2A) lead time; provisioning first-time-right
- Port-in / port-out completion time
- Billing end-to-end completion time (cycle close T+n)
- Bill prep → confirmation time
- Billing reruns (count, root cause, cost)
- Bill accuracy; rating/mediation errors; revenue leakage
- Accounts ready for collection
- ... +3 more (see Word doc)

OSS / IT application & service management

- Application availability by tier (gold / silver / bronze)
- P1/P2 incident volume, duration, MTTR
- Repeat incident rate; major incidents
- Problem backlog; known-error sunset rate
- Change success rate; emergency change rate; failed deployments
- SLA attainment by tower (BSS, OSS, CRM, ERP, integration)
- API / transaction success rate on critical journeys
- Batch job SLA (billing, mediation, reporting)
- ... +1 more (see Word doc)

Network (RAN · core · transport · fixed)

- Network availability (2G/3G/4G/5G, fixed broadband)
- Call setup success; drop call rate; data session success
- Throughput, latency, congestion
- VoLTE / VoWiFi success
- Site/cell outage count & duration; MTTR (network)
- RAN/core utilization & capacity headroom

Infrastructure, cloud & platform

- Compute/storage availability; patch compliance
- Cloud spend vs budget (FinOps); unit cost per subscriber/transaction
- Backup/restore success; capacity forecast accuracy
- Database & middleware performance
- Observability coverage (% services with SLO monitoring)
- ETL / data pipeline SLA

Security, risk & compliance

- Security incidents; MTTD / MTTC / MTTR
- Critical vulnerability backlog & patch SLA
- Fraud / access anomalies
- Regulatory reporting timeliness

Data & integration governance

- Master data quality (customer, product, inventory, billing account)
- Order fallout due to data mismatch
- BSS ↔ network ↔ finance reconciliation gaps
- Report freshness / data latency

Multivendor ecosystem (managed services)

- Vendor SLA attainment by tower
- Cross-vendor escalation time
- Shared CPI attainment; penalty exposure
- Automation / playbook reuse across vendors

Autonomous operations maturity

- Reactive → predictive → autonomous mix
- % incidents auto-remediated (closed-loop)
- Top-offender closure rate
- SPOG correlation across BSS + OSS + network
- Human touch rate on P1 scenarios
