

Reusable Autonomous Operations on customer KPIs / OKRs

Large telecom operator · multi-vendor · multi-domain. Propose reusable managed services: reactive → predictive → autonomous, anchored on customer-agreed key performance indicators.

NORTH STAR

End-user experience and Net Promoter Score · service-level / contractual performance-indicator attainment · market trust. Total cost of ownership funds the outcome — it is not the outcome.

GIVEN

Ericsson + third-party under Managed Services

METHOD

Design→Deploy→Operate→Assure→Improve · pilots first

PROOF

Telefónica Argentina · Three UK

AGENDA · 10 MINUTES

1 Economic unlock → 2 Autonomy path → 3 Measure & reuse → 4 Enable & commercialize → 5 Profit-and-loss & close

Vendor consolidation unlocks autonomy — it is not the north star

IT OPS BUDGET

\$50m

Multi-vendor run cost

AFTER CONSOLIDATION

\$40m

~20% TCO reduction

GOVERNANCE

–20%

Vendor / SLA overhead

REACTIVE

Ticket storms · multi-vendor blame

OBSERVE

One health view across domains

PREDICT

Anomaly detection before impact

AUTONOMOUS

Self-heal · human-in-loop → policy auto

LIFECYCLE

Design → Deploy → Operate → Assure → Improve — one productized journey; intent & policy replace tribal manual action over time.

Size from incidents. Contract soft-ramp. Productize reuse.

DISCOVERY → CONTRACT

- 6–12 months incident ingest
- SME + AI → maturity per component
- Top-offender backlog
- CPI catalogue with soft-ramp
- Same scoreboard for roadmap & P&L

REUSE LIBRARY

- Metrics / runbook / self-heal packs
- Drag-drop to next account
- Ericsson + third-party adapters
- Thin adapters > rip-and-replace
- Improve feeds global library

ILLUSTRATIVE CONTRACTUAL PERFORMANCE INDICATORS

Availability credits ~20% · Priority-0/1 restore ≤4h (~10% credit) · Change success ≥98% · Proactive problems ≥20% · Repeat P0–P2 ≤10%. Credit % = financial exposure if breached.

Enable customer ops and regions. Sell autonomy maturity.

CUSTOMER OPERATIONS

- Train on single pane & performance board
- Shadow → co-pilot → autonomy expand
- Resist tribal workarounds

ERICSSON REGIONS

- Library playbooks
- Deal Desk by autonomy tier
- Demo + month 3/12/18 gates

COMMERCIAL

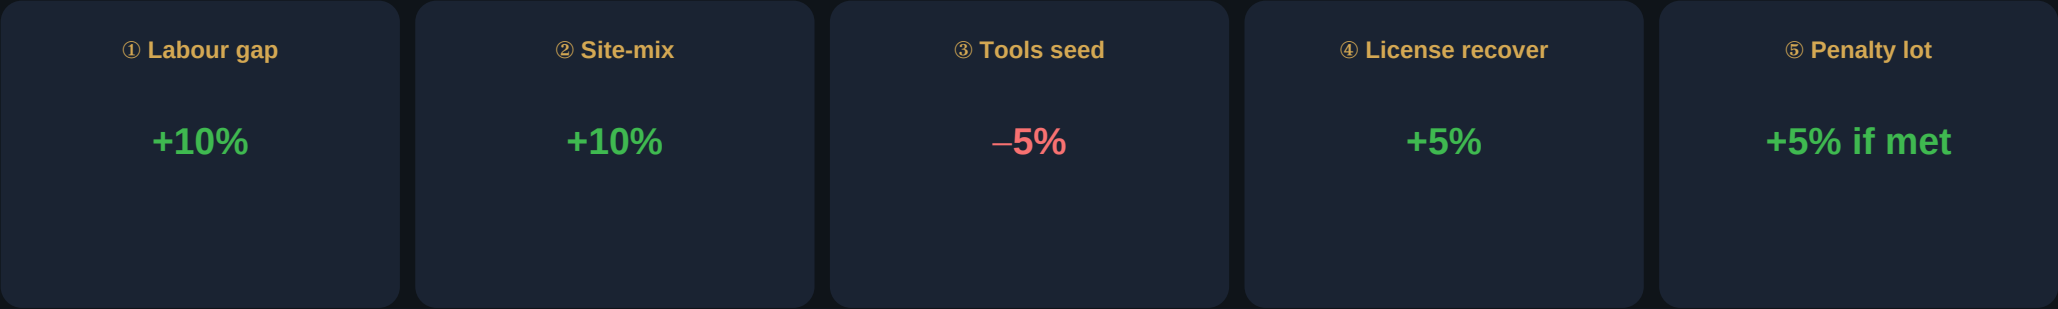

- Outcome bands ≠ effort hours
- Pilots before multi-region scale
- One-pager: TCO + milestones

ASSUMPTIONS → PILOTS BEFORE SCALE

Validate TCO, soft-ramp, and library reuse on a bounded estate. Pass-gates before regional rollout.

Full-time-equivalent ramp · site-mix · tools · penalty lot

Baseline headcount B. Target X = B–30%. Customer commit ~20% run-cost cut; size at 30% → ~10-point structural EBIT gap.

Lived proof. One recommendation.

TELEFÓNICA ARGENTINA — ~\$100m

Top-offender discipline · executive KPI transparency · accountability restored → renewal

THREE UK — ~\$125m

Vendor consolidation · ~75 CPIs · SPOG + self-heal · 474→336 FTE · lowest Priority-1s

RECOMMENDATION

Launch reusable Autonomous Operations managed services (Ericsson + third-party under MS) selling autonomy maturity + unified observability + outcome KPIs as one productized journey — with enablement and pilots before scale.
